

The selected UOs are: **Manage Reservation, Record Attendance, Record Productivity, Check Attendance Dashboard.**

Contract is a continuing class between Customer/Company and Employment/Department. We want to keep track of all the contracts made over the years between the Customer/Company and our department. We will review the updated information each CRID. We only maintain the contract information attributes provided to get updated. However, all of the attributes can be changed if needed.

We only include the employees-prisoners that work in the department in our system

We modeled **Factory/Manager** as a descendant of **Department/Manager** in order to create the association that forms the subjectivity of the prisoners to their manager.

WorkOrder is the sheet that comes with each order and describes the packaging instructions for each item produced.

AttendanceRecord data attribute is a partial attribute. A **ProductivityRecord** is uniquely identified by the combination of Prisoner ID and Date.

AttendanceRecord data attribute is a partial identifier. An **AttendanceRecord** is uniquely identified by the combination of Prisoner ID and Date.
